

SHOWERING
made easy

crosswater[™] 

SHOWERING *made easy*

From practical all-in-one solutions, suitable for everyday bathing, to luxurious multifunctional designs that leave you feeling indulged and rejuvenated, our extensive range of in-shower brassware offers everything you need to create an experience that is tailored to you.

Expertly manufactured using the latest in thermostatic technology, all of our quality shower valves and kits are designed to provide superior function, whatever the water pressure or outlet requirements. Choose from exposed valves with single outlet functions, perfect for the budget-conscious bathroom, to multiple-outlet designs with the capacity to control numerous water flows simultaneously.

Our high-performance shower kits and valves have been cleverly designed for use in any shower or bath, with the option to mix-and-match components to create your preferred combination of style, water flow and spray pattern. From luxury fixed showerheads and hand-held options, to wall mounted handsets, Crosswater has a vast selection of versatile and user-friendly designs to meet the demands of any bathing space, whether a family-friendly bathroom, functional shower room or indulgent wash space.

RANGE OVERVIEW	48

Choose YOUR SHOWERING EXPERIENCE

Showers are now expected to work even harder in our bathrooms, catering to busy lifestyles, multiple users and various functions. We're on hand to help you decide which showering solution is right for you and your requirements. Combining superior function with the latest trend-led designs, the extensive range of shower brassware is not only guaranteed to provide a fully functional showering experience but also designed to create a contemporary statement that will complement any bathroom scheme.

Crosswater has an unrivalled collection of shower valves to provide you with the ultimate in performance. Choose from single-outlet designs and modern recessed valves, to highly efficient multi outlets. Whatever your preference, all designs are brilliantly engineered to suit British plumbing systems.

EXPOSED VALVES	14
RECESSED VALVES	20
MULTIFUNCTION VALVES	40

EXPOSED VALVES - ONE OUTLET

Simplicity without compromising on performance, this fuss-free option is great for those working to a budget and looking for basic functionality.

RECESSED VALVES - ONE OUTLET

For a minimal look, our recessed valves offer superior function from behind the scenes - team with a statement showerhead for single outlet showering.

RECESSED VALVES - TWO OUTLET, SINGLE CONTROL

Maintaining the stylish look of a flush recessed valve, with the option of an additional outlet. Switch between showerhead flow and handset.

RECESSED VALVES - TWO OUTLET, TWIN CONTROL

Showering flexibility with multiple flow options. Twin control allows you to simultaneously use two outlets, controlled by a smart recessed valve.

MULTIFUNCTION VALVES

The all-in-one, complete showering experience, our multifunctional options incorporate an exposed valve, showerhead, rail and handset in one simple to install design.

BATH/SHOWER VALVES

We also have a choice of quality valves for over-bath showering where users can easily switch between shower and bath filler options.

INSPIRATION

Showering simplicity. Simplicity at its best, our stylish range of single function shower valves is ideal for everyday fuss-free showering. Featuring user-friendly on/off functions and one essential flow position, these easy-to-install valves boast superior water pressure and the latest in thermostatic technology to give users an effective and invigorating showering experience. And with a wide range of contemporary designs on offer, there's a style to suit all bathrooms.

Shown left: Square thermostatic shower valve, see page 17 Shown above: Shower pack GTL001, see page 16

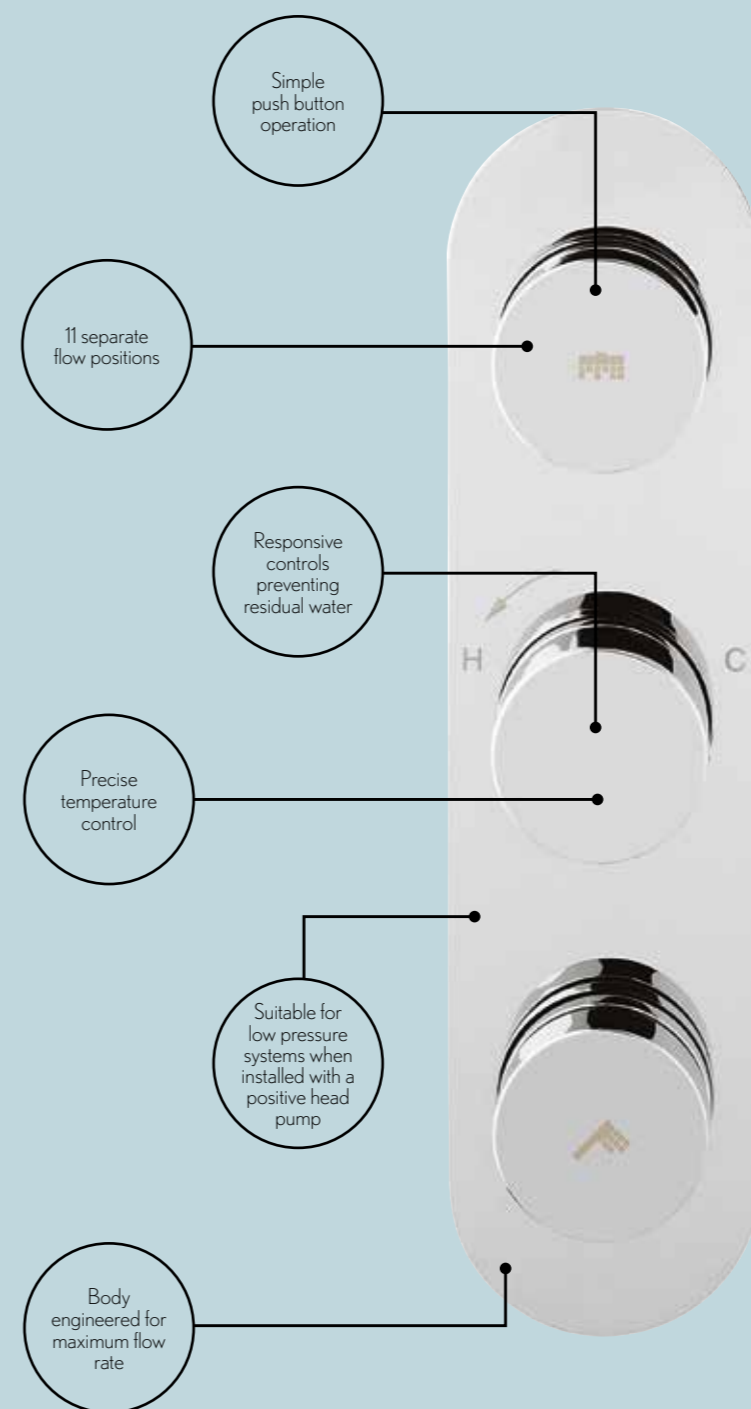

INSPIRATION

Dial - Push button valve technology

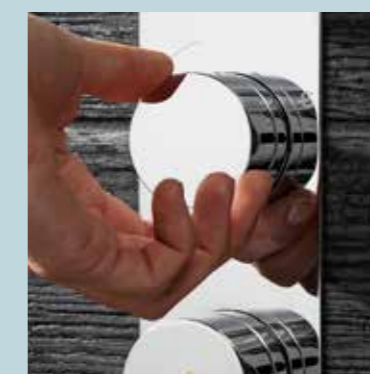

The latest in push-button shower technology, Dial valves allow you to precisely control the flow of water and temperature simultaneously. Available in both single and double outlet options, Dial sets a new benchmark in bathroom design, with cutting-edge on/off operation offering complete showering control at the touch of a button. This innovation allows for multifunctional showering and bathing, whereby outlets can be used both independently and in-sync with a superior effect to that of standard diverters.

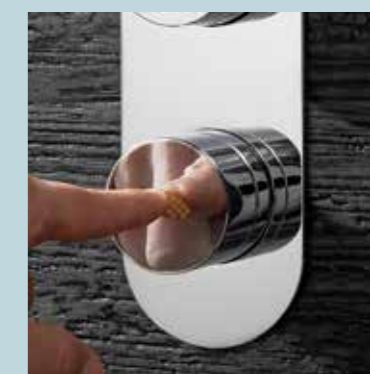

Shown above: Shower pack GTL034, see page 26

Turn to increase/reduce the water flow

Turn the middle dial to adjust the temperature

Push the bottom dial to start/stop water flow of an additional outlet

Shown above: Shower pack GTL021, see page 33 Shown right: Belgravia exposed shower valve, see page 44&45

Get the traditional look. Perfect for adding a touch of elegance, our range of traditional shower valves encompass luxurious styling alongside 19th-century influences for a distinctively classic look. Characterised by beautifully sculpted exposed valves, glazed ceramic levers and inscribed indices, our traditional collection is the ideal choice for advocates of period design. The range also features the latest modern valve technology so that you don't have to compromise on function to achieve a beautifully classic look.

Showering in the bath. Ideal for multifunctional bathing and smaller spaces, opt for an over bath shower valve. Providing users with the ability to control shower and filler functions separately, lack of space needn't mean that you have to compromise on usability with our superior range. Choose from single or dual outlets and a choice of handsets and fixed or adjustable showerheads for a practical yet on-trend choice for multi-use bath/showers.

HOT GRAVITY & COLD GRAVITY/MAINS

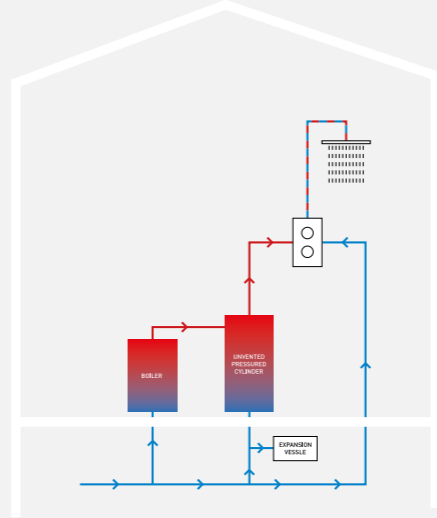

LP

Low Pressure - LP min (0.2 bar)

- ✓ You have a cold water storage tank in the loft.
- ✓ You have a hot water cylinder.
- ✓ You do not have a shower pump installed.

If all of the above apply to your home you can choose any product marked with LP (min 0.2 bar).

Note A gravity fed system provides MP (0.5 bar) to fittings downstairs in a 2 story property where the cold water tank is in the loft.

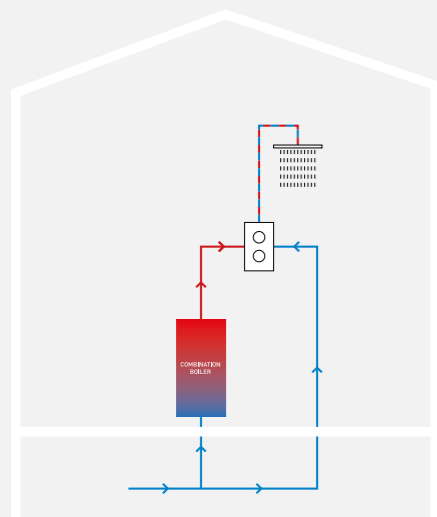

MAINS HIGH PRESSURE

HP1 HP2 HP3

High Pressure - HP1 to HP3 (1 to 3 bar)

- ✓ You have an unvented cylinder with an expansion cylinder.
- ✓ You have no cold water tank in the loft.

If either of the above apply to your home you can choose any product marked LP, MP, HP1, HP2 and HP3 (minimum 1/2/3 bar).

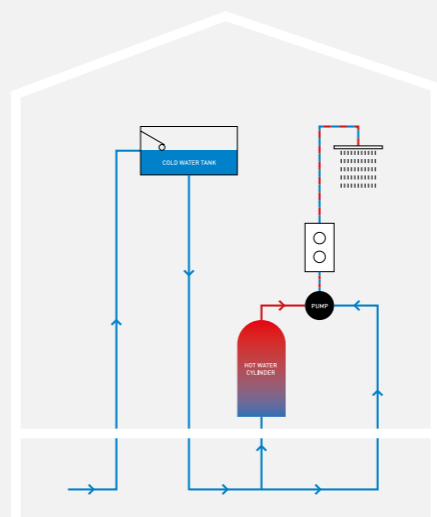

COMBINATION BOILER

MP

Medium Pressure - MP (0.5-1 bar)

- ✓ You have a combination boiler that heats water on demand.
- ✓ You do not have any storage tanks.
- ✓ You do not have a shower pump installed.

If all of the above apply to your home you can choose any product marked with LP, MP or HP1.

PUMP ASSISTED

MP HP1 HP2 HP3 HP4

High Pressure - MP to HP4 (0.5 to 4 bar)

- ✓ You have a booster pump fitted.

Where a gravity flow of water is in excess of 0.6lpm, this is known as a 'Positive Head' condition (e.g. when your shower head is positioned lower than your cold water storage tank). In this situation, a positive shower pump can be used. A 'Negative Head' condition is when the gravity flow of water is less than 0.6lpm (e.g. when your shower head is positioned above the cold water tank level). In these conditions, a negative head pump must be used.

Negative shower pumps will work in both positive and negative head conditions. So for example, in a situation where there is a shower head above and below the water tank level; one negative shower pump can be used for both.

With the right pump, you can choose any of our products.

A guide to WATER PRESSURE

In order to select a showering system that will give optimum performance you need to identify the water pressure of the plumbing system in your home. Water pressure is a term used to describe the flow strength of water through a pipe; it is measured in bar. By identifying your home's plumbing system you can select a product that best suits your water pressure.

Whilst the majority of crosswater products are compatible with most systems, some high pressure (HP) products are designed to work with high pressure systems only. Products marked LP (low pressure) and MP (medium pressure) are also suitable for high pressure (HP) systems.

- LP minimum 0.2 bar
- MP minimum 0.5 bar
- HP1 minimum 1 bar
- HP2 minimum 2 bar
- HP3 minimum 3 bar
- HP4 minimum 4 bar
